Course Outline

This Level 3 Dental Immediate Emergency Life Support Course for Conscious Sedation covers recognition and management of common dental and medical complications for both Adult and Paediatric patients, CPR and Enhanced Airway and BVM skills. Involving scenario based learning and skills teaching.

Course Objectives

- Demonstrate the use of the ABCDE approach in the recognition and management of a sick patient.
- Recognise respiratory depression and cardiac arrest.
- Describe the procedure for alerting the cardiac arrest/medical emergency team or summoning help from the ambulance service.
- Demonstrate the use of effective chest compressions (rate, ratio, depth, recoil, compressor change) as a single rescuer and as part of a team.
- Demonstrate administration of oxygen using a bag-valve-mask and management of the airway using appropriate airway adjuncts. – OP/NP/iGel
- List the safety measures required before performing defibrillation.
- Demonstrate the safe and effective operation of an automated external defibrillator.
- Support, recognise and manage common medical emergencies in the dental practice and administer drugs appropriate to your role in the clinical team.

Regulations

This Level 3 course is 'Aligned to the Core Skills Training Framework (CSTF) and complies with the Resuscitation Council (UK) current guidelines. It meets the core competencies as set out in 'Standards for Conscious Sedation in the Provision of Dental Care'.
